Sustainability Complaint Request Form — Basic Fields Use Case

Smart Campus Sustainability & Carbon Tracker — Zoho Creator Lab Record

Kanishka S | *240701227*

1. Aim

To design and build a functional Sustainability Complaint Request form in Zoho Creator that demonstrates the correct use of all thirteen Basic Fields available in the Form Builder — Name, Email, Address, Phone, Single Line, Multi Line, Number, Date, Time, Drop Down, Radio, Multi Select and Checkbox — and to generate a Sustainability_Complaint_Report that lets the facility team filter, verify and assign submitted complaints.

This addresses the campus problem of sustainability issues (lights left on, leaking taps, overflowing bins) being reported verbally, on paper or through messaging groups, which leads to missing locations, unclear descriptions and delays in routing the issue to the right team. A single structured online form gives every complaint a clean digital record before it reaches the facility staff.

2. Procedure

Step 1: Open the application: The application **Smart Campus Sustainability & Carbon Tracker** was opened in Edit mode in Zoho Creator.

Step 2: Create the form: The Form Builder was opened and a form named **Sustainability_Complaint_Form** was created, organised into four sections: Reporter Details, Contact Details, Complaint Details, and Scheduling & Declaration.

Step 3: Add reporter and contact fields: A Name field (Reporter_Name) with First/Last name sub-fields, a Radio field (Reporter_Type: Student / Staff / Visitor), a Single Line field (Reporter_ID), an Email field (Email_Address), a Phone field (Contact_Number) and an Address field (Campus_Address) were dragged onto the canvas.

Step 4: Add complaint fields: A Drop Down field (Complaint_Category), a Date field (Date_Of_Observation), a Number field (Estimated_Wastage), a Multi Select field (Resources_Affected) and a Multi Line field (Complaint_Description) were added to the Complaint Details section.

Step 5: Add scheduling and declaration fields: A Time field (Preferred_Inspection_Time) and a Checkbox field (Declaration_Of_Authenticity) were added to the final section, completing all thirteen Basic Fields.

Step 6: Configure validations: Mandatory flags, e-mail and phone format checks, a positive-only Number rule, a no-future-dates Date rule and a compulsory declaration checkbox were set in the Field Properties panel.

Step 7: Submit sample records: Three sample complaints were submitted through the live form, and the auto-generated Sustainability_Complaint_Report was opened to verify that every value was stored correctly.

Step 8: Verify the workflow: Submission was tested end to end: validation on Submit, record creation in the report, and filtering by Complaint Category and Estimated Wastage for assignment to an inspection.

3. Output

3.1 Form Builder — Sustainability_Complaint_Form with all 13 Basic Fields

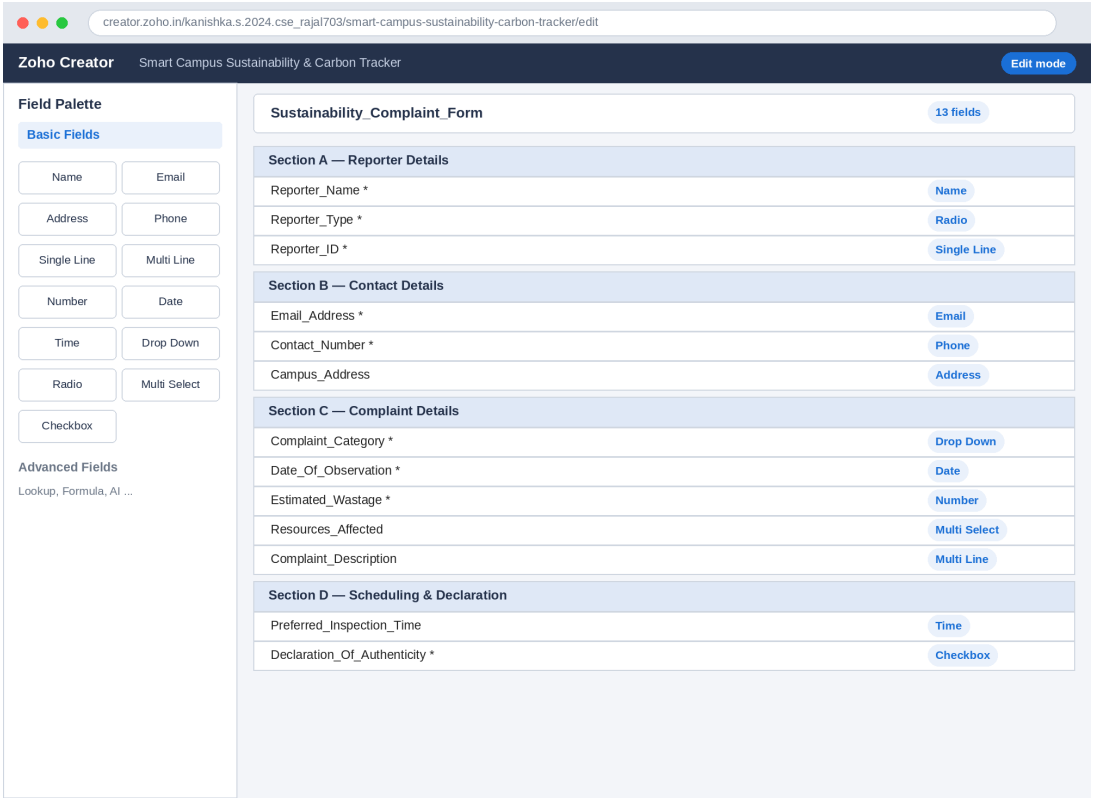

*Fig 3.1 — Basic Fields palette (left) and the four form sections (right); * marks mandatory fields (illustration).*

The palette on the left lists all thirteen Basic Fields; each is placed in its section on the canvas and named as specified.

3.2 Field Properties — Validation rules

Rule	Field(s)	Configuration
Mandatory	Reporter_Name, Reporter_Type, Reporter_ID, Email_Address, Contact_Number, Complaint_Category, Date_Of_Observation, Estimated_Wastage, Declaration_Of_Authenticity	Mandatory enabled in Field Properties
Email format	Email_Address	Built-in e-mail format validation enabled
Phone format	Contact_Number	Country code format enabled for Indian numbers
Positive value	Estimated_Wastage	Number restricted to positive values (minimum 1)
No future dates	Date_Of_Observation	Future dates disallowed in the date picker
Declaration	Declaration_Of_Authenticity	Form cannot be submitted unless checked

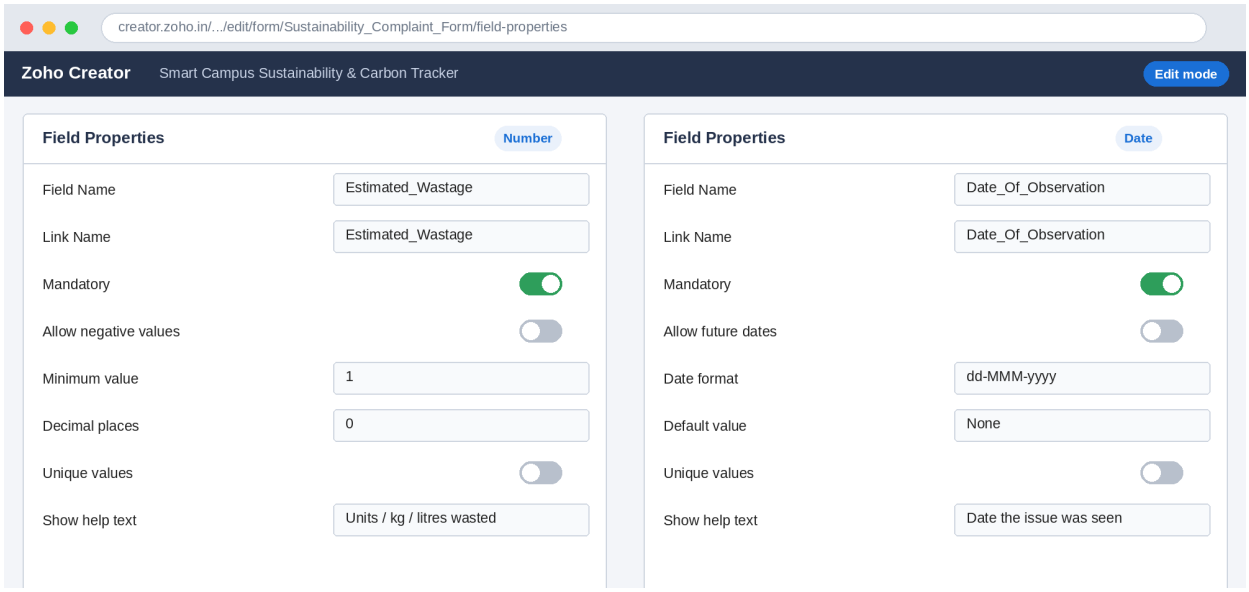

Fig 3.2 — Field Properties for Estimated_Wastage and Date_Of_Observation (illustration).

3.3 Live preview of the Sustainability_Complaint_Form

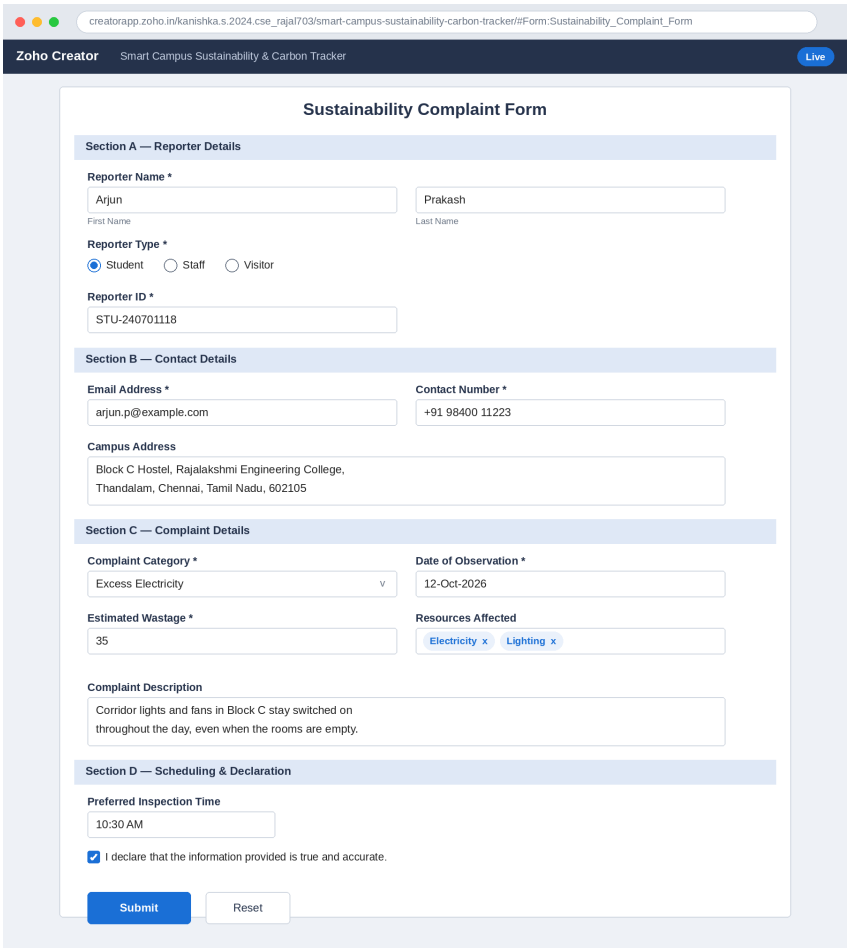

Fig 3.3 — Live form with sample data entered (Sample Record 1) (illustration).

The live preview shows how the reporter sees the form. The Name field shows First and Last name boxes, Reporter Type is a single-choice radio group, Complaint Category is a drop down, Resources Affected is a multi-select showing the chosen items, and the declaration checkbox must be ticked before Submit will succeed.

3.4 Report View — Sustainability_Complaint_Report

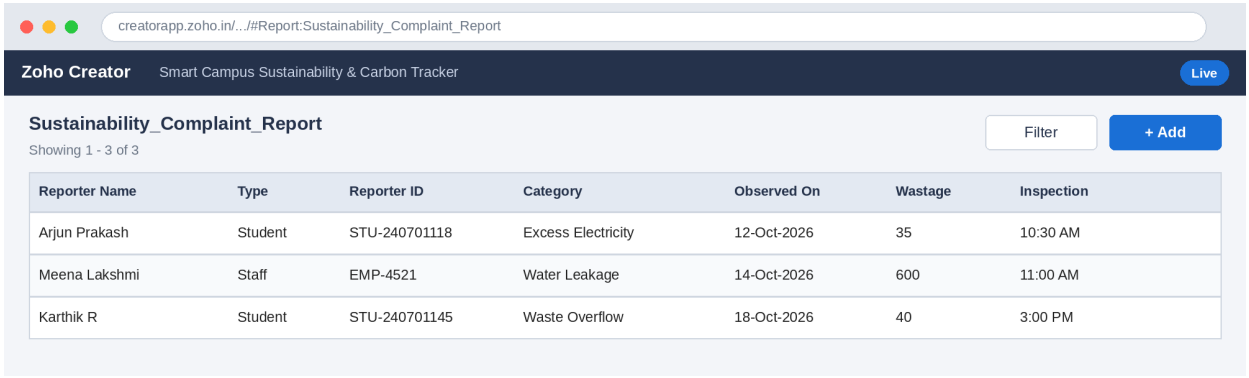

Fig 3.4 — Report list view showing the three submitted complaints (illustration).

After submission, Zoho Creator created one record per complaint in the Sustainability_Complaint_Report. The list view allows the facility team to filter by Complaint Category and Estimated Wastage, and opening a record shows every field value exactly as the reporter entered it.

3.5 Complaint submission workflow

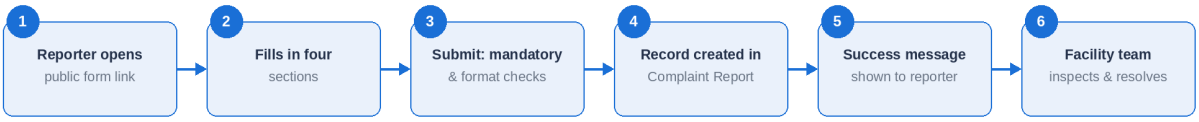

Fig 3.5 — Workflow from form submission to inspection.

The reporter submits the form, Zoho Creator validates mandatory fields and formats, creates the record and shows a success message. The facility team then reviews the report and schedules an inspection at the Preferred Inspection Time.

4. Final Result

A functional Sustainability Complaint Request form was successfully built in Zoho Creator using all thirteen Basic Fields: Name, Email, Address, Phone, Single Line, Multi Line, Number, Date, Time, Drop Down, Radio, Multi Select and Checkbox. Each field was mapped to a clear role in capturing reporter identity, contact details, complaint category, observation date, wastage estimate, affected resources and a declaration of authenticity.

The form was organised into four reporter-friendly sections, and field-level validations — mandatory fields, e-mail and phone formats, a positive wastage value, no future observation dates and a compulsory declaration — were configured and tested.

Three sample complaints were submitted and verified in the auto-generated Sustainability_Complaint_Report, confirming that form values flow correctly into the report used by the facility team.

The exercise met its objective: an informal, scattered way of reporting campus sustainability issues was replaced by a single structured, low-code digital form that gives the facility team complete, validated records ready for filtering, verification and assignment.
